Author Guidelines

A complete LATEX style file for DOS for submissions to this journal is available to download as a zip archive (92 KB) but it is not compulsory to use it:

<http://www.blackwellpublishing.com/pdf/RSSstylefile.zip>

Click [here](#) to download the style guide in PDF format.

Disclosure of financial and other interests

Some journals have policies requiring authors of submitted papers to declare potential conflicts of interest. The purpose is not to remove the conflict but to publicise it, and to allow readers to form their own conclusions on whether any conflict of interest exists. For many of the papers submitted to the *Journal of the Royal Statistical Society* this is unlikely to be an issue. However, such interests may take many forms, including financial considerations and situations where one or more of the authors have acted as consultants or advisors (paid or otherwise) to a project relevant to the submitted paper. This does not imply that there is anything wrong with holding such interests or that research published by authors with such interests is thereby compromised. With the aim of encouraging transparency and accountability, however, authors of material submitted to the *Journal of the Royal Statistical Society* are asked to disclose any financial or other interest that may be relevant and/or would prove an embarrassment if it were to emerge after publication and they had not declared it. The appropriate place for such disclosures is in the covering letter to the Editor. At the Editor's discretion, this information may be printed at the end of the paper if it is published.

General

1. Manuscripts must be original contributions and should be submitted exclusively to

The Executive Editor
The Royal Statistical Society
12 Errol Street
London
EC1Y 8LX
UK
Tel: +44 (0)20 7614 3914
E-mail: journal@rss.org.uk

2. Manuscripts submitted in electronic form are encouraged. They can either be sent by e-mail to the above address as .ps or .pdf file attachments or retrieved by us by notification of their availability in these forms from a Web location (which will not be disclosed further). If accepted for publication, the source file of the final version will be required, preferably LATEX or TEX (Word files might also be suitable), but these forms or the .dvi derivatives should not be supplied for initial submission.

3. Alternatively, five paper copies should be posted to the above address.

4. In either case, a covering message or letter should accompany the paper, giving full contact details of the author for correspondence and any other information that is relevant to the submission. If the paper is to be considered for reading at an Ordinary Meeting of the Society, this should be clearly indicated.

5. A short summary of about 100 words must be included at the beginning of the manuscript, together with 5 or 6 keywords or phrases to describe the content of the paper.
6. The author to whom proofs are to be sent and full postal and e-mail addresses must be clearly stated on the title page. No new material may be introduced at the proof-reading stage.
7. Illustrations and tables can be either embedded within the text or supplied separately at the end of the manuscript. All illustrations (and tables) should be referred to sequentially in the text.
8. References should not be numbered but should be standardised as follows:
 - (a) in the text, only the authors' surnames should be given, followed by the year of publication in parentheses (for three or more authors, only the first surname should be given, followed by *et al.*; the abbreviations *ibid.*, *op. cit.* and *loc. cit.* are not used);
 - (b) at the end of the paper, the references should be listed in alphabetical order of surnames.

Examples for a paper in a journal, a book and a paper at a conference are:

Mollié, A. and Richardson, S. (1991) Empirical Bayes estimates of cancer mortality rates using spatial models. *Statist. Med.*, 10, 95-112.

McCullagh, P. and Nelder, J. A. (1989) *Generalized Linear Models*, 2nd edn. London: Chapman and Hall.

Pregibon, D. (1983) Score tests in GLIM with applications. In *GLIM 82: Proc. Int. Conf. Generalised Linear Models* (ed. R. Gilchrist), pp. 87-97. New York: Springer.

9. Mathematical equations should be typed on separate lines, numbered consecutively and punctuated in the usual way. Matrixes should be indicated by italics and vectors by bold. The development of mathematical expressions, if necessary, should be presented in appendixes with only the relevant equations stated in the main text. The order of brackets in nested expressions is $\{ \{ () \} \}$.

Copyright Assignment Form

Authors will be required to assign copyright in their papers to the Royal Statistical Society. Copyright assignment is a condition of publication and papers will not be passed to the publisher for production unless copyright has been assigned. To assist authors an appropriate copyright assignment form will be supplied by the editorial office. Alternatively, authors may like to download a copy of the form [here](#). Government employees need to complete the Author Warranty sections, although copyright in such cases does not need to be assigned.

For further information or advice contact the Executive Editor at the Society's address.
